

CLAIMS

Therefore, having thus described the invention, at least the following is claimed:

- 1 1. A medical bur, comprising:
2 a bur head having a cutting portion and a stop portion; and
3 a shaft extending from said bur head;
4 wherein said cutting portion of said bur head is adapted to rotate under
5 power and said stop portion of said bur head is adapted to move independently with
6 respect to said cutting portion.

- 1 2. The medical bur of claim 1, wherein said stop portion is arranged and
2 configured to rotate freely.

- 1 3. A bur head of a medical bur, wherein said bur head comprises:
2 a cutting portion being arranged and configured to rotate at at least one
3 controllable pre-determined speed; and
4 a stop portion being arranged and configured to move independently with
5 respect to said cutting portion.

- 1 4. The medical bur of claim 3, wherein said stop portion is arranged and
2 configured to rotate freely.
